10,111

Total Deaths

207

Total People Tested

60,569

Total Confirmed Cases Recovered

3,572

COVID-19 data are reported as timely, accurately and completely as we have available. Data are updated as we receive information that is more complete and is subject to change.

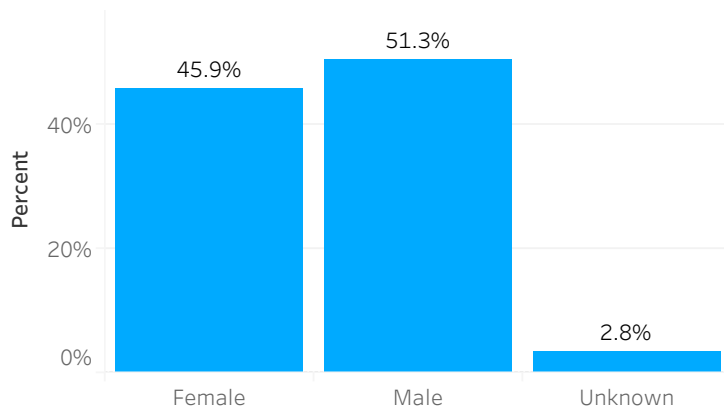

COVID-19 can affect people of any age, but adults in Iowa have been diagnosed with COVID-19 much more frequently than children. Children may still have (and spread) COVID-19, but not be so sick that they go to the doctor and get tested. Further, testing remains limited and physicians may not test children with mild disease, so they may be less likely to be reported as having COVID-19. Adults 60 and older have died more frequently than younger adults and children.
